4 Each person in a fitness club is going to get a free gift.
Stan is going to order the gifts.

8 The number of days, $d$, that it will take to build a house is given by

$$
d=\frac{720}{n}

where $n$ is the number of workers used each day.
Ali's company will take 40 days to build the house.
Hayley's company will take 30 days to build the house.
Hayley's company will have to use more workers each day than Ali's company.
How many more?

9 The diagram shows a cube and a cuboid.

The total surface area of the cube is equal to the total surface area of the cuboid.
Janet says,
"The volume of the cube is equal to the volume of the cuboid."
Is Janet correct?
You must show how you get your answer.
Surface area of cuboid

$$
6 \times 8 \times 2=96 \mathrm{~cm}^{2}
$$

$$
6 \times 18 \times 2=216 \mathrm{~cm}^{2}
$$

$$
18 \times 8 \times 2=\frac{288 \mathrm{~cm}^{2}}{-600 \mathrm{~cm}^{2}}
$$

If surface area of cube $=600 \mathrm{~cm}^{2}$ $600 \div 6=100 \mathrm{~cm}^{2}$ each face $\therefore 10 \times 10 \times 10=1000 \mathrm{~cm}^{3}$ volume

Volume of cuboid $=6 \times 8 \times 18$ $=864 \mathrm{~cm}^{3}$

Janet is incorrect
